WHAT WE DO

Design & development

Designora is a startup team that designs and builds websites, web applications, and digital brands. We start with what your users need and carry that through to the design and development.

01

Website Development

Responsive business websites and landing pages built around your goals.

02

UI/UX Design

User flows, wireframes, and interface designs that make key tasks easier.

03

E-commerce Development

Online storefronts with product browsing and checkout flows.

04

Web Applications

Custom tools, dashboards, and applications for business workflows.

05

SEO Optimization

Page structure and metadata that help search engines understand your site.

06

Website Maintenance

Updates and ongoing support after launch.

HOW WE WORK

Discovery / Design / Development / Launch

We agree on the scope first, review the design with you, and test the build before launch.

SELECTED WORK / 01

AI & MICROSERVICES

AI Recruitment Platform

PROJECT CONTEXT

Recruitment teams need a way to manage candidate profiles, company accounts, and job listings in one platform.

APPROACH

The team built separate services for candidates, companies, and jobs. Thilini led the API gateway, JWT authentication, and service integration.

TECHNOLOGIES

Spring Cloud Gateway, Spring Security, MongoDB, Redis

RECOMMENDATION SYSTEM

Movie Recommendation AI

PROJECT CONTEXT

Browsing a large movie catalogue can make it hard to decide what to watch.

APPROACH

The app combines a browsable catalogue with a recommendation service that uses MovieLens data. A React interface connects to the Spring Boot backend and FastAPI service.

TECHNOLOGIES

React, Spring Boot, FastAPI, MySQL, MovieLens

SELECTED WORK / 02

Project case studies

GENERATIVE AI

AI Software Engineering Assistant

PROJECT CONTEXT

Software engineering references can be spread across multiple PDFs, making relevant answers hard to find.

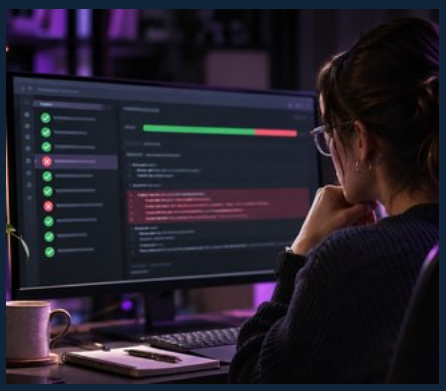

APPROACH

Users upload PDFs and ask questions in Streamlit. The assistant retrieves relevant passages before generating an answer, a workflow known as retrieval-augmented generation.

TECHNOLOGIES

Python, Streamlit, PDF ingestion, retrieval-augmented generation

QUALITY ASSURANCE

QA AI Assistant

PROJECT CONTEXT

Software QA teams need to reason through testing tasks and quality-related questions.

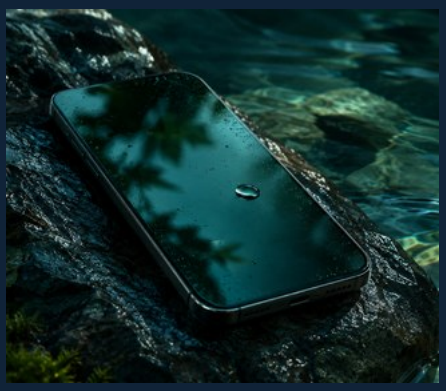

APPROACH

QA AI Assistant explores how AI can support software quality assurance. The source repository is linked below for implementation details.

APP DEVELOPMENT

Aqua Guardian App

PROJECT CONTEXT

Aqua Guardian is a team app project in the Designora showcase.

APPROACH

The linked repository contains the application source for technical review.

View on GitHub

EDUCATION

Online Exam System

PROJECT CONTEXT

An online exam system gives students a digital environment for taking exams.

APPROACH

This project focuses on conducting exams online. The linked repository provides the implementation for review.

EDUCATION

Student Result Management System

PROJECT CONTEXT

Keeping student exam results organized makes them easier to manage and retrieve.

APPROACH

This project centers on managing student examination results. The linked repository contains the implementation.

GENERATIVE AI

FinDesign AI Assistant

PROJECT CONTEXT

Banking marketing teams need campaign concepts and visual directions to develop a brief.

APPROACH

FinDesign AI Assistant helps explore banking campaign ideas and plan visual content during the early creative stage.
